

VEHICLE ACTIVATION SPEED SIGN

DETECTION, CALMING & ENFORCEMENT WITH ANPR

The Vehicle Activated Speed Sign is a highly efficient and cost-effective traffic calming device suitable for all types of roads. Radar speed display offers excellent readability from a distance of 300 meters, featuring ultra-bright tricolor LED speed displays and programmable messages.

With 99% accurate data collection for both directions, including traffic analysis, it proves to be effective in promoting traffic calming and road awareness.

The system offers the possibility of integration with our specialised camera technology, thereby augmenting safety measures and facilitating the collection of detailed data concerning instances of excessive speeding.
