BUILD TEXT MESSAGES & GRAPHICS

GET IT ON  
Google Play

Available on the  
App Store

The BartcoLive™ app means that wherever you are, you can control the messages displayed on any of your portable VMS, with greater speed and flexibility.

## CONTROL YOUR COMMUNICATIONS

Hire mobile variable message signs (VMS) and other temporary intelligent transport systems (ITS) products and solutions from MVIS and benefit from Web Studio™ technology.

This sophisticated technology saves travel time and costs by enabling the instant communication of traffic information from any internet enabled device including Apple and Android smartphones, laptops, iPhones and iPads. Users can view a map of

their signs and zoom in, observe and adjust any number of signs in line with any developments on the ground. The Web Studio™ system supplied by MVIS is ideal for organisations that hire multiple signs including police forces, event managers, local authorities and traffic agencies. Users can:

- View a map of hired assets
- Track the exact location
- Gain directions to the VMS
- Program multiple units by the touch of a button
- Build text messages and graphics
- Schedule messages
- Check battery voltages
- Check communication
- Enable speed radar activation messages
- Check history
- Create a restricted login
- Create a library of messages

MVIS' clever Queue Detection software technology has been designed to give warnings via our VMS to oncoming motorists.

It provides motorists the opportunity to react sooner to traffic congestion by highlighting upcoming hazards on exit slip roads or roads ahead. Queue Detect aims to take away the unpredictability and provide a much more free flowing journey for motorists.
