- Red and white LEDs for text and pictograms
- 28 x 28 matrix with a 20mm pixel pitch
- Mounted on a portable solar power box

With hidden cabling, this unit is secured against vandalism or accidental damage and benefits from the data collection radar integrated in all our signs.

This makes our Portable VMS a low-cost alternative to many data collection solutions on the market, offering a data source for the analysis of traffic trends and enabling greater intelligence for planning projects of all kinds.

MVIS' HD Compact was the first of its kind, designed for use within sites in order to improve safety and to communicate information to the public. Developed in line with customer feedback and market research, the HD Compact offers the industry a light-weight, portable, solar powered message sign that features a dual colour (red and white) display.

This unit's small footprint and adjustable height makes it highly versatile, especially considering the display content can be updated remotely via our web-based portal or mobile app.
