- Weight: 690kg

The MVIS Solar Intelligent Platform (Solar IP) is a cutting-edge, trailer-based portable power solution designed to support a wide range of Intelligent Transport Systems (ITS) and surveillance technologies.

This highly versatile, portable solar CCTV unit provides an eco-friendly and cost-effective alternative to traditional fixed installations, delivering reliable off-grid power wherever and whenever it's needed.

As a solar-powered 'power bank', this unit not only delivers clean energy but also enhances the portability of connected devices, granting them extended autonomy without dependency on external power or communications infrastructure. This makes it particularly useful in hard-to-reach or infrastructure-poor locations.

With MVIS's expert support, customers can build a fully integrated ITS solution tailored to their specific needs. The Solar IP is available for flexible hire terms, allowing you to scale your portable solar CCTV or traffic system up or down with ease.
